PRIMEGRIP

WHO WE ARE

Since 1985, Primeline Tools Inc. has been providing skilled professionals with the best equipment for their projects. As a family owned and operated business in Mississauga Canada, we take great pride in providing the highest quality products to our customers across the globe.

Through our Primegrip division, we manufacture and distribute professional grade hand tools and accessories for the HVAC, Electrical, Plumbing and Industrial trade professionals who demand the best in performance and durability on the job site. We pride ourselves on our emphasis and dedication to continually innovating and improving our products to ensure the highest quality and maximum function at a competitive price in the market.

We have identified three major strengths in our product lines that we utilize and build on to ensure our continued growth. The first is innovation and product diversity; we have vast knowledge and expertise in the industries we are involved in, from the operations of large-scale organizations right down to the needs of the smallest work crews. This expertise enables us to continuously innovate our product lines to maximize functionality and minimize price points, as well as expand our lines to supply additional tools needed by tradespeople. This strategy makes the sourcing and supply chain process easier to manage for our distributors and retailers as well by consolidating a range of products to a single vendor, Primeline.

The second strength of product lines is retail merchandising. The quality of any product would go unnoticed without the kind of presentation that invites the customer to buy it. As part of our Retail Wall Program, we develop customized planogram solutions for our distributors. We select the product mix, design, implement, service and maintain the wall sections, contributing to unparalleled sales performance with minimal management required from our customer staff.

Last, but definitely not least, is our brand identity. Bold colours that stand out in crowded retail spaces. Attractive merchandising with a focus on allowing our customers to feel the product and become comfortable with it before making a purchasing decision. Competitive price points so that our end users can focus on what they do best without worrying about taking care of expensive tools.

These are the reasons why professionals choose to go with the black & green.
